## DETAILED ACTION

### *Information Disclosure Statement*

The information disclosure statement filed 04/01/05 has not been considered with respect to the US 6,796,944 B2 because the Name of the inventor does not match. With respect to the 4 NPL documents they have been considered. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

### *Drawings*

The drawings are objected to because it is unclear how the additive pump is connected to the device. Applicant is recommended to include a line which connects the additive pump 50 to the regenerate dialysate tube similar to that in fig. 3 if that is what applicant is intending without addition of any new matter. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary,

the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Response to Amendment***

The only claim being treated on the merits is claim 1. Applicant has canceled claims 5-6,14-15. The claims withdrawn are 2-4,7-13.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Roberts et al. USPN 5,944,684 in view of Scott USPN 4,765,907 .

Roberts et al. disclose a peritoneal dialysis system for a patient comprising a peritoneal dialyzer, a regenerated dialysate inlet tube and a spent dialysate outlet tube (2,3) . Roberts et al. disclose the tube (2,3) to be a double lumen indwelling catheter and is used to provide continuous inflow and outflow. Roberts et al. disclose hormones, nutrients , therapeutic and other beneficial agents to be introduced into the purified dialysate from the sorbent/regeneration section/columns from an optional infusion unit or through other means and devices incorporated into the dialysate circuit such as a pump 8b.

If applicant is not convinced that Roberts et al. teach 2 lumen or tubular structure then it would have been obvious to one of ordinary skill in the art of catheters to modify the double lumen catheter of Roberts et al. with the teaching of Scott ( Scott discloses an inlet and outlet tube in a peritoneal dialysis system comprising a peritoneal dialyzer, a sorbent section and addition of additives) to provide a separate inlet and outlet catheter in place of a single catheter with an inlet and outlet tubular lumen.

#### *Response to Arguments*

Applicant's arguments with respect to claims 1,5 have been considered but are moot in view of the new ground(s) of rejection.

#### *Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
